In celebration of the 34th anniversary of the independence of the Republic of Uzbekistan, a ceremonial opening of production facilities for three new resident companies — LLC "LYUDI I CIFRI," LLC "TEG," and LLC "IOTA" — took place at the Chirchiq Chemical-Industrial Technopark.

The event was attended by the Hokim of Chirchiq city, Murodjon Abdurakhimov, First Deputy Chairman of the Management Board of JSC “Uzkimiyosanoat,” Yevgeniy Korzhikov, representatives of the “Himgrad” technopolis, and members of the media.

These new projects play an important role in meeting the needs of the domestic market, increasing export potential, and developing the industrial sector. Specifically:

- LLC “LYUDI I CIFRI” manufactures shelving and equipment for retail trade.
- LLC “TEG” produces microprocessor-based centralization systems for railway networks, as well as automation and telemechanics devices.
- LLC “IOTA” manufactures hoses and pipes for automotive air conditioning systems.

The production facilities are equipped with modern European machinery.

Approximately 250 local residents have been employed through these projects.
